

Protection Helmet:

All-in-One Helmet with Integrated Respirator and Filters

Recommended for pesticide spraying in the open and in greenhouses, for grain handling, cleaning and disinfecting stables and pens, and any other work where the respiratory system needs to be protected effectively.

A unique model. It is the only compact integrated helmet of its kind with a flip-up visor for better worker protection against organic vapors and dust.

The positive pressure helps to breathe comfortably even under strain. It fits most head sizes and accommodates beards and eyewear. Air flow distribution was studied for uniform ventilation around the operator's head. Battery charger with automatic, controlled charge.

The model is designed for immediate use. After adjusting the headband size, the worker simply has to press the start button inside the helmet and tighten the collar drawstring around the neck.

The helmet works by means of a slight overpressure that is created inside the helmet by a flow of filtered air. Air is drawn through two filters by means of two built-in blower units powered by a rechargeable battery.

Standard Components:

- one helmet,
- two blower units and one lithium battery included in the helmet,
- one battery charger,
- two A2P3 filters,
- one shoulder support.
