

WANJET T1 Transfer for spray robot

Wanjet T1 is a machine for automatically moving the Wanjet Spray robots along the path of concrete from row to row. The machine, together with the Wanjet spray robot, forms a fully automatic spraying system that can work without any labor present.

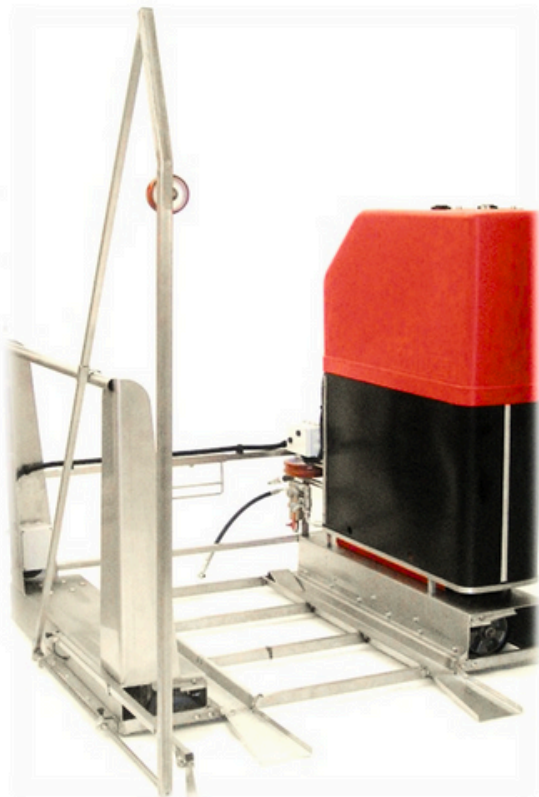

Pros with WANJET T1:

- Treats your plants with fully automatic spraying
- Reduces staff's personal exposure to chemicals
- Saves labor time

The working principles

Wanjet T1 moves the Wanjet spray robot along the concrete path from one alley between the rows of plants to the next.

The T1 is controlled by the same user-friendly type of software as the Wanjet spray robots.

Simple to configure - just specify the number of pathways that are to be treated and start. The unit will send out the robot into the alley and collect it when it returns. The T1 will then move the robot to the next alley.

During the operation, it ensures that the maximum treatment time for the path is not exceeded. In case of problems, it stops and sends a telephone SMS to the operator.

Principles of guidance

The unit is guided either by a guidance arm, which is guided along the entrance of the piperail paths, or by a pin as slide-way guidance on the main path.

Design

The machine has a frame that is completely made of polished stainless steel. Almost all fasteners on the machine are made of stainless steel. The cover is made of crush-proof and chemical-resistant polyethylene.

Technical data

Dimensions (lxwxh), cm	126x146x152
Weight, kg	235
Motor power, W	300
Batteries capacity, Ah	40
Hose reel capacity, m	150, Hortispray light weight hose 1/2
Hortispray T1, art no	5601

Optional accessories:

Art no

Description	Art no
Guidance arm	4444
Pin attachment for slide way	4445
Battery charger 24 VDC, 12	5408
GSM alarm by SMS	4443
Hose, leigh weight 1/2"	5418
